MECHANICAL RELEASERS WITH JVC

MECHANICAL RELEASERS WITH JVC SYSTEM

These releasers operate without electricity. They can be installed on a storage tank, in a non-isolated station. The JVC system can reduce backflow by 50% thanks to its two valves which work independently. It is most efficient when vacuum is higher.

ELECTRIC RELEASERS

ELECTRIC RELEASERS

Simple to use and maintain, this releaser is very effective up to -25 vacuum thanks to the external pump (not included). It does not heat the sap and does not create any backflow.

Washing system (optional)

The washing system is only available on horizontal models. It effectively cleans the inside of the releaser when the vacuum is on.

*Not available on BHR224 and BHR224-1 models

Washing system*
Without manifold

HYBRID RELEASERS

HYBRID RELEASERS

During great flows, if the pumps fail, the mechanical mechanism takes over. It can also work with or without electricity, which is very advantageous during power failure.

Its installation is always done on a storage tank.

2-JET WASHING SYSTEM

included on all horizontal hybrid releasers

activates automatically when the pump starts

SUBMERSIBLE PUMP RELEASERS

CHOOSE YOUR Pump Starters

Two types of pump starters are available.

Float

Robust, it has a float that moves on a rod with the water level. The pump starts when the float reaches the switch and stops when it goes back down.

Probes

The electrodes sense the sap level in the tank to start or stop the pumps. They are equipped with an ice detection protection as well as a sensitivity adjustment to prevent unnecessary starting.

Stainless steel washing system piping (optional)

Horizontal releasers

CHOOSE YOUR Types of submersible pump

Six different pumps are available.

Horizontal submersible pump

- 34 HP, 30 GPM
- 1/2 HP, 30 GPM
- 1 HP, 20 GPM
- 1 HP, 30 GPM
- Ε 1 ½ HP, 30 GPM
- F 1 ½ HP, 50 GPM
- 1 ½ HP, 45 GPM

BOTTOM LOADING (A, B, D PUMP)

1 HP, 30 GPM

the right pump for your needs

Horizontal Releaser	Vertical Releaser
Pre-cut for 1 to 4 pumps	Pre-cut for 1 to 3 pumps
You can therefore add pur	mps according to the capacity

of your releaser and according to your needs.

INTERNAL SS 1 1/4" Vertical releasers and some horizontal models

PITLESS Horizontal releasers

The ingenuity of pre-drilling these release for 1 to 4 pumps means you can keep your release and easily add an extra pump to suit your future needs. You can even install the pump on the left or right.

Alternation system (optional)

This system allows the pumps to be operated alternately during smaller flows and simultaneously during greater flows.

TRANSFER TANKS

TRANSFER TANKS

Similar to the manifold on a releaser, the transfer tank is a device that allows sap from multiple mainlines to be combined into one larger diameter mainline to reduce the amount of mainlines needed to connect the network to the pumping station. In addition, the vacuum air network connects to the device, ensuring its uniformity throughout the network.

VERTICAL TANK

HORIZONTAL TANK

ICE BLOCKING GRID

*OPTION: Available only on horizontal models

WATER TRAPS

WATER TRAPS

The water trap is a box that is installed between the releaser and the vacuum pump. It's equipped with an emergency stop switch to protect the vacuum pump. The switch cuts power to the pump motor when water collects inside the trap due to a failure of the releaser, preventing water from reaching your pump and causing damage.

PROTECTS all vacuum pumps

High Performante Water and Vapor Trap The most efficient on the market

On dairy farms:

when cleaning with boiling water, the WÔ vap! recovers water vapors and milk fat; preventing contamination of the vacuum pump oil.

WÔ vap! is the solution to reduce the costs of oil changes, filter, labor and pollution.

Maple syrup production:

the WÔ vap! replaces water traps and protects vacuum pumps. Indispensable for maximum production without restrictions.

Water and vapor trans

Diameter of tanks	Valves	In (releaser)	Out (vacuum)	
8"	manual valves	2"	2"	25R01-08
8"	electric valves - automated - contact	2"	2"	25R03-08
12"	manual valves	3"	3"	25R01-12

Vacuum Gauges

Indicate the possibility of the resistance between the inlet and the outlet

4 levels of protection

- 1) in the tank from the inlet
- 2) in the tank from the outlet
- 3) in the inlet section
- 4) float between inlet and outlet

100 Microns Filter on primary inlet

2 drainable water tanks without vacuum loss

(optional) **External filter** 100 Microns

To be used when lots of dirt and contaminants are present

REVERSE SLOPE RELEASERS

REVERSE SLOPE RELEASERS

Used when there is a reverse slope, the reverse slope releaser can send the sap up to a maximum height of 20 feet depending on the vacuum.

It must be installed with two pipes, one for air and one for sap, so that during the release, the vacuum is found in the sap inlet manifold. This system greatly reduces the recoil effect.
